Give description of when observations should take place:	<p>Observation on the flower bud should take place: just before opening</p> <p>Observation on the flower should take place: at full flowering</p> <p>Observation on the leaf should take place: at full flowering</p> <p>Other observations should take place: at full flowering</p>	
<p>Uniformity:</p> <ul style="list-style-type: none"> - For the assessment of uniformity of vegetatively propagated, self-pollinated seed propagated varieties or F1-hybrids, a population standard of 1% and an acceptance probability of at least 95% should be applied. In the case of a sample size of 24 plants, 1 off-types are allowed. - For the assessment of uniformity for cross-pollinated varieties, the recommendations for cross-pollinated varieties in the General introduction of UPOV should be applied. The variability within the variety should not exceed the variability of comparable varieties already known.
