1. INTRODUCTION BY BART KIEWIET, PRESIDENT OF THE CPVO

1.1. The state of the Community plant variety protection system

The out-turn of 2006 shows a stabilisation in the number of applications. The steady growth of the Community PVR system seems to have come to a halt. This is, in my opinion, not something to be worried about. On several occasions I have expressed the opinion that, also in respect of our system, the trees do not grow into heaven. The system finds its limits in the potential of the breeders to create new varieties on one side and the capacity of the market to absorb them on the other. With limited modifications of the present fee levels, which have a transitional character, it will be possible to maintain the self-financing nature of the system.

When speaking about the end of the growth of the system it should be underlined that this tendency is limited to the number of applications. As far as the annual grants of titles and the varieties under protection are concerned, important increases have been realised.

1.2. Multi-beneficiary project Turkey and Croatia

The CPVO is developing a programme, subsidised 95 % by the European Commission, to prepare Croatia and Turkey for possible accession to the Community plant variety protection system. The major part of the programme will be executed in 2007.

The CPVO has the support of the Member States, in particular the examination offices and the breeders' organisations in the implementation of the programme.

During the report period, I have met the responsible authorities in both countries to discuss the details of this project. The meetings proved to be very useful and showed the interest of both countries in plant variety protection and related issues.

The project should be finalised at the end of 2007. The European Commission is considering following it up in 2008, concentrating on another candidate EU Member State, the former Yugoslav Republic of Macedonia.

1.3. Cooperation with Japan

The Japanese Ministry of Agriculture and the President of the CPVO have signed a letter of understanding aimed at reaching a higher level of cooperation between the CPVO and the Japanese PVR authorities on technical, juridical and administrative matters. The parties are, in particular, interested in exploring the possibilities of the mutual taking over of DUS test reports drawn up in line with UPOV guidelines and applicable legislation. Both parties have undertaken studies on how to achieve this objective. As a first step, collaboration is initiated in respect of the following ornamental species: Petunia, Calibrachoa and Rose.

*Memorandum with
Japan 17 November 2006*

In the framework of this cooperation Japanese experts accompanied by specialists of the CPVO have during the report year visited examination offices in the Netherlands and Germany.

1.4. Enforcement seminar Warsaw

Enforcement seminar in Warsaw, 11 and 12 May 2006

On 11 and 12 May 2006 the CPVO organised in the Polish capital a seminar to highlight the main aspects of the enforcement of intellectual property rights in general and Community PVR's in particular. The target countries for the seminar were the new Member States in

the north-east of the EU as well as Germany and Austria. National and Community officials together with representatives of breeders' and producers' organisations presented papers on this very important subject. The seminar was attended by more than 150 people.

I would like to express my appreciation for the strong support we have received from the Polish authorities in organizing the seminar, which was held under the aegis of the Polish minister of agriculture.

1.5. Strategic discussion

The 'strategic discussion' about the modalities of DUS testing in an enlarged Community has taken place during the report year. In the three working groups the prevailing conclusion was that examination offices should meet strict quality requirements in order to be entitled to the status of 'competent' or 'entrusted' examination office. Furthermore, it was considered essential that an accreditation procedure would be established in order to assess examination offices as regards their compliance with the quality requirements. Last but not least, it was generally accepted that a DUS report from a competent examination office should be accepted in the framework of the

Community and national PVR systems, as well as for listing purposes, the 'one key, several doors principle'.

The relevant quality requirements and the modalities of an accreditation scheme were further elaborated. In respect of the latter subject an agreement was reached on the role the CPVO and its Administrative Council should play.

The conclusions of the strategic discussion will be presented to the Administrative Council in March 2007.

1.6. Boulevard Foch No 9

The preparatory phase of the refurbishment of the newly acquired building has reached its final stage. It is our hope that the works to adapt the building to the requirements of a modern office building will start in the spring of 2007.

Bart KIEWIET

President of the CPVO

2. FOREWORD BY HEINZ-PETER ZACH, CHAIRMAN OF THE ADMINISTRATIVE COUNCIL

Introduction

The high number of applications received in 2006 is once again an illustration of the appreciation of breeders for the Community system. An appreciation not only based on the intrinsic value of this system but also on the quality of the services provided by the CPVO staff.

The appointment of Bart Kiewiet for a third seven as President of the CPVO reflected the appreciation of all the stakeholders of the Community plant variety protection system for the way he has led the CPVO in the past 10 years.

We said goodbye to some (alternate) members of the Administrative Council: I would like to thank them for their valuable contributions to the work of the CPVO.

I would like to express a special word of thanks in respect of my predecessor Carlos Godinho, who for six years fulfilled his task of chairman of the Administrative Council in an excellent way.

The last part of my contribution to this annual report is the analysis and the assessment of the 'Authorising officer's report' for 2006.

This document was adopted by the Administrative Council in its meeting of 20 and 21 March 2007 in Angers.

2.1. Analysis and assessment of the authorising officer's report

The President of the Community Plant Variety Office presented the annual activity report for the year 2006 to the Administrative Council at its meeting in Angers on 20 and 21 March 2007.

The Administrative Council analysed and assessed the report and came to the following conclusions:

1. The system continued its growth.
2. The reserve was significantly reduced largely due to the reduced annual fees since the beginning of the year 2006.
3. The Administrative Council welcomes the formalisation of internal control and the risk assessment and is satisfied with the results of the internal audit. It is particularly satisfied with the achievements in mitigating the risks identified.
4. The Administrative Council takes note of the information on ex post verifications, negotiated procedures and the confirmation of instructions.
5. The Administrative Council takes note of the declaration of the authorising officer that his report gives a true view and that he has reasonable assurance that the resources assigned to the activities described in his report have been used for their intended purpose and in accordance with the principles of sound financial manage-

ment, and that the control procedures put in place give the necessary guarantees concerning the legality and regularity of the underlying transactions. The Administrative Council is satisfied that the President of the CPVO is unaware of any matter not reported which could harm the interests of the CPVO.

Heinz-Peter ZACH

Chairman of the Administrative Council

3. THE COMMUNITY PLANT VARIETY RIGHT SYSTEM

The introduction of a Community plant variety system in 1995 has proved to be a successful initiative that has been welcomed by the business community seeking intellectual property protection for new plant varieties. As has been mentioned in the introduction to this Annual Report, the number of applications has increased over the years and the Community Plant Variety Office ('the Office') has adapted its size and organisation to meet the increased demand.

Through the enlargement adding 10 new Member States of the EU, the Community plant variety protection system is even more attractive than before. Breeders may now be granted protection guaranteeing exclusive exploitation rights for a variety throughout 25 countries on the basis of a single application to the Office. In 2007 two more Member States, Bulgaria and Romania, will join the Community making titles valid in 27 countries.

The Community plant variety system is not intended to replace or even harmonise national systems but rather to exist alongside them as an alternative; indeed, it is not possible for the owner of a variety to exploit simultaneously a Community plant variety right (CPVR) and a national right or patent in relation to that variety. Where a CPVR already exists in relation to a variety, any national right or patent granted in one of the Member States for that variety will be ineffective. Where a CPVR is granted in relation to a variety for which a national right or patent has already been granted, the national right or patent is rendered ineffective for the duration of the CPVR.

The legal basis for the Community plant variety system can be found in Council Regulation (EC) No 2100/94 (hereunder 'the basic regulation'). On receipt of an application for a CPVR, the Office must establish that the variety is novel and that it satisfies the criteria of distinctness, uniformity and stability (DUS). The Office may arrange for a technical examination to determine DUS, to be carried out by the competent offices in Member States or by other appropriate agencies outside the Community. In order to avoid unnecessary duplication of work, where such a technical examination is being, or has already been, carried out in relation to a variety for official purposes, the Office may, subject to certain conditions, accept the results of that examination.

Anyone may lodge an objection to the grant of a CPVR with the Office, in writing and within specified time limits. The grounds for objection are restricted to allegations either that the conditions laid down in Articles 7 to 11 of the basic regulation are not met (distinctness, uniformity, stability, novelty or entitlement), or that the proposed variety denomination is unsuitable due to one of the impediments listed in Article 63. Objectors become parties to the application proceedings and are entitled to access to relevant documents.

Except in two specific instances where a direct action against a decision of the Office may be brought before the European Court of Justice, a right of appeal against such a decision lies to a Board of Appeal consisting of a Chairman, appointed by the Council and two other members selected by the Chairman from a list compiled by the Admin-

CPVO main entrance

appeal lodged with the CPVO and the decisions reached by the Board of Appeal.

Once granted, the duration of a CPVR is 25 years, or 30 years in the case of potato, vine and tree varieties. These periods may be extended by legislation for a further five years in relation to specific genera or species. The effect of a CPVR is that certain specified activities in relation to variety constituents or harvested material of the newly protected variety require the prior authorisation of the holder of the right, which authorisation may be made subject to conditions and limitations. Infringement of a CPVR entitles the holder of the right to commence civil proceedings against the perpetrator of the infringement.

Registers open to public inspection contain details of all applications received, and all CPVRs granted, by the Office. Every two months, the Office publishes its *Gazette of the Community Plant Variety Office* which also provides this information, as well as other material. Information on applications and varieties in force are also found in a database accessible on the Office's website.

istrative Council. The addressee of a decision, or another person who is directly and individually concerned by the decision, may appeal against it. After examining the appeal the Board may exercise any power within the competence of the Office or remit the case to the Office which is bound by the Board's decision. Actions may be brought before the European Court of Justice against decisions of the Board.

The table in the Annex to this report shows the number of notices of

Vineyard

4. THE ADMINISTRATIVE COUNCIL

The CPVO is supervised by an Administrative Council comprising one representative of each Member State, one representative of the European Commission and their alternates.

The Administrative Council monitors the activities of the Office. In particular, it is responsible for examining the annual report of the President, adopting the Office's budget, and granting discharge to the President in respect of its implementation. In addition, it can provide advice, establish rules on working methods within the Office and issue guidelines on technical examinations, committees of the Office and general matters.

The Administrative Council met three times in 2006, on 14 and 15 March, on 12 September and on 14 and 15 November.

At the meeting on 14 and 15 March, the provisional accounts and financial analysis for the 2005 financial year were presented together with the preliminary draft budget for 2007. The members of the Administrative Council granted discharge to the President of the CPVO for the implementation of the budget for 2004.

They also adopted:

- the amending budget for 2006;
- the authorising officer's report, which, in accordance with Article 39(2) of the financial regulation, was sent to the Court of Auditors and included in the Annual Report for 2005;
- the list of qualified members of the Board of Appeal for a period of five years from 23 February 2006 to 22 February 2011;
- the proposal by the CPVO to test the plant varieties proposed by the UPOV member countries that are not members of the EU.

The members of the Administrative Council approved the consolidation of the CPVO's accounts with the accounts of the European Union's general budget, as well as the membership of three working groups set up under the strategic discussion on the future of DUS testing.

They discussed several other important matters, including:

- the possible assigning of new tasks to the CPVO;
- the introduction of Community plant variety protection courts;
- the involvement of external experts in DUS testing.

At an exceptional meeting on 12 September, the members of the Administrative Council heard each of the preselected candidates for the post of Vice-President of the CPVO, and then put the matter to a vote. The results were presented to the Commission in the order of the votes obtained.

At the meeting, the members of the Administrative Council unanimously adopted the second amending budget for 2006. They also adopted an amendment of the rules implementing the CPVO's financial regulation of 16 September 2003 to permit the recruitment of temporary agents to the post of Accounting Officer at the CPVO.

At the meeting on 14 and 15 November, on the basis of a unanimous vote by the 23 delegations present, the Administrative Council appointed its new Chairman, Mr Zach (Austria). Mr Ileršič from the Slovenian delegation was elected Deputy Chairman of the Administrative Council.

The Administrative Council, by unanimous vote of the voting members present or voting by proxy, adopted:

- the draft budget for 2007;
- the new CPVO technical protocols and revised protocols for dahlias, hops, sweet cherries, sour cherries and morello cherries, blackberries, alstroemeria, chrysanthemums, dendrobiums, pansies, roses, willow trees and tulips.

The members of the Administrative Council took note:

- of the report by the President of the CPVO on the internal audit for 2006;
- of the fact that the CPVO intends to modify the co-financing procedure for CPVO research and development projects and would produce a draft;
- of the fact that they would be consulted in March 2007 on the appointment or renewal of the mandates of the Chairman and Alternate to the Chairman of the CPVO Board of Appeal.

At the request of the Commission, the members of the Administrative Council also issued a positive opinion as regards authorising Taiwan to apply for plant variety protection in the European Union, and with respect to the CPVO proposal to grant access (free of charge initially, the situation being reviewed after one year) to the centralised denominations database by the CPVO's customers and EU Member States.

The members of the Administrative Council reported on progress in consultations with their respective ministries on designating courts for Community plant variety rights protection. The members agreed in principle with the proposal. It was decided that the proposal should be forwarded to the Commission so that the latter could produce a formal proposal to amend the basic regulation. This would allow the Member States to make an official response to the formal proposal in due course.

Lastly, the members of the Administrative Council endorsed the appointment of the new Accounting Officer selected by the CPVO.

CPVO Administrative Council

5. STAFF OF THE CPVO

In December 2006, the Office comprised 11 officials, 28 temporary agents and three auxiliary agents. Twelve nationalities from the European Union's Member States were represented. One seconded national expert from Germany joined the CPVO in November 2006.

5.1. Organisation of the Office

Under the general direction of its President, assisted by the Vice-President, the Office is organised internally into two units and three support services dealing with legal, personnel and IT matters.

CPVO Staff

- **The Technical Unit** has as its principal tasks: general coordination of the various technical sectors of the Community plant variety rights system; reception and checking of applications for protection; organisation of technical examinations and technical reports; organisation of variety denomination examinations; preparation for granting of rights; maintenance of the Office's registers, production of official technical publications; relations with applicants, national offices, stakeholders and international organisations; active participation in international committees of technical experts and cooperation in the development of technical analyses and studies intended to improve the system.
- **The Administrative and Financial Unit** is active in two areas:
 - **Administrative Section:** awarding contracts for goods, services or works in compliance with the procedures in the CPVO's financial regulation; the conclusion, administration and management of contracts; organisation of the Office's publications; administration, management and monitoring of the Office's inventory of movable property and buildings; administration of requirements in logistical, office automation, computing and operational resources with a view to ensuring the smooth functioning of the Office;
 - **Financial Section:** management of the financial workflow of the Office (commitment, validation, authorisation and payment of expenditure, in particular that relating to technical matters); recovery of revenue, reimbursement of undue sums; reserve funds and cash, maintenance of the budgetary and general accounting systems and preparation of budgets and financial documents; management of the fees system.

- **The Legal support service** provides legal advice to the President and other members of the Office staff, in principle on matters related to the Community plant variety rights system, but also on questions of an administrative nature; it provides legal interpretations and opinions and also draws up draft legislations; it participates in various CPVO committees, thus ensuring that Community procedures and legislation are respected; it manages the administration of objections to applicants for CPVRs and provides the Secretariat of Office's Board of Appeals.
- **The Human Resources** function deals with the administration and management of the Office's human resources in compliance with the Staff Regulations of the European Commission.
- The **IT** team ensures that the Office runs smoothly in computing terms. Its tasks include: analysis of the Office's hardware and software requirements; the design, development and installation of new programs specific to the Office; development and maintenance of the websites of the Office; installation of standard programs; maintenance of the computer installation and its administration; the computer system's security; the helpdesk and interinstitutional cooperation in computing.

6. RESEARCH AND DEVELOPMENT

Following the rules established by the Administrative Council in 2002 for supporting financially projects of interest for the Community plant variety right system, the Office received several applications for co-financing R & D projects. The following projects received financial support from the CPVO in 2006:

Harmonisation of resistance tests for diseases of vegetable crops in the European Union:

the final year of the three-year collaborative project between GEVES (France), Naktuinbouw (the Netherlands) and OEVV/IVIA (Spain) to evaluate and harmonise disease resistance tests for two model species: tomato and French bean. The ring test results of 2006 were compared with those of 2005. A final synthesis and analysis of the results was made at the last meeting held in Madrid in October, at which time discussions were held about a formal proposal for the harmonisation of resistance assessment and the possibility to extend the project to other species and disease resistances. The final report was presented to the Office at the end of December 2006.

Creation of a common maize database for DUS studies through a partnership between Spain, Germany, France and the CPVO: a database collectively set up during a two-year period containing administrative as well as morphological and biometrical data from the reference collections of the participating institutions with the purpose to select efficiently reference varieties for the DUS test of new maize varieties. The project has been finalised successfully. An annual telephone conference was held in 2006 for maintaining and updating purposes.

European variety collection of rose varieties: a project coordinated by Plant Research International (PRI) and carried out by the Bundessortenamt, NIAB and PRI/NAKTUINBOUW aiming the compilation of key morphological characteristics, pictures and DNA fingerprints eventually facilitating a (cost) efficient management of reference collections. The work started in 2005 and was concluded at the end of 2006. The results will be presented to breeders in 2007.

Management of winter oilseed rape reference collections: the NIAB project in cooperation with GEVES, DIAS and the Bundessortenamt tries to establish the use of DNA marker as a tool for an efficient selection of suitable reference varieties. The project started in 2005; the final results may be expected in 2007.

Development and evaluation of molecular markers linked to disease resistance genes for tomato DUS testing (Option 1a): the first year in a two-year collaborative project between PRI and Naktuinbouw (the Netherlands), GEVES and INRA (France), and IVIA and OEVV (Spain): current mapping and sequence information was analysed for seven asterisked disease resistance in the CPVO tomato protocol. At a meeting in Paris in November, the partners in the project discussed the next step on the evaluation of marker assays via their prior testing for reproducibility and robustness. Further ahead, a set of standard varieties will be identified on which to run the marker assays in order to make a direct comparison with the phenotypic characterisation.

Potatoes: the project started in April 2006. The partners involved are Germany, the Netherlands, Poland and the United Kingdom. The project foresees the creation of a database including marker profiles of potato varieties, key morphological characteristics and a photo library with lightsprout pictures. The aim is to rapidly identify plant material of a vegetatively propagated crop where reference material has to be submitted every year and to ease the management of the reference collection.

7. FINANCES AND BUDGET

7.1. Revenue

The Office's revenue basically comprises various fees paid by applicants for and holders of Community plant variety rights and revenue from interest on bank accounts. The total revenue collected in 2006 was EUR 9.3 million.

The principal types of revenue collected in 2006 are broken down as follows:

- **Fees**

Fees received in 2006 totalled EUR 9 million. This amount was composed of EUR 2.5 million application fees, EUR 3.7 million examination fees, EUR 0.2 million report fees and EUR 2.6 million annual fees.

- **Interest on bank accounts**

The Office's current accounts collected EUR 0.5 million in interest.

7.2. Expenditure

The total amount for recorded expenditure and commitments carried over was EUR 10.3 million.

- **Staff expenditure**

The total amount of staff expenditure was EUR 4.4 million. Almost 100 % of the appropriations for wages were used.

- **Expenditure on buildings and movable property and miscellaneous administrative expenditure**

The total amount for this expenditure committed was EUR 1.6 million, comprising EUR 0.7 million disbursed during the year and EUR 0.9 million to be disbursed in the following year.

- **Operational expenditure**

The total amount for this expenditure committed was EUR 5.4 million. The total of outstanding commitments to be disbursed in subsequent years was EUR 9.3 million at the end of 2006.

7.3. Out-turn for the financial year and accumulated reserve fund

The net out-turn for the year is the difference between revenue and expenditure, including carryovers of commitments to subsequent years and commitments carried over from the previous year that were not used and therefore were cancelled.

	<i>m EUR</i>
Budgetary outcome of the financial year	- 1.0
Non-budgetary expenses	0.0
Non-budgetary income	0.3
Net outcome of the financial year	- 0.7
Cumulated outcome carried over from the previous financial year	14.9
Outcome to be carried over	14.2

8. DEVELOPMENTS IN THE **COMMUNITY** SYSTEM

8.1. Applications for Community plant variety protection

In 2006, the Office received 2 735 applications for Community plant variety protection. As illustrated in Graph 1, this is a nearly identical number to that in 2005.

GRAPH 1: EVOLUTION OF THE ANNUAL NUMBER OF APPLICATIONS FOR COMMUNITY PLANT VARIETY PROTECTION (YEARS 1996–2006)

Agriculture species as illustrated in Table 2 show the highest increase in application numbers compared to the rest of the species, with + 22.5 %. As for fruit species, an increase of + 21 % was recorded followed by vegetables with + 16.7 %. By contrast, decreasing application numbers were noticed for ornamental species (– 5.4 %).

GRAPH 2: EVOLUTION OF APPLICATION NUMBERS PER CROP SECTOR (YEARS 1996–2006)

The graph below represents shares of the main crop sectors in number of applications since the beginning of the activities of the Office.

GRAPH 3: SHARES IN APPLICATION NUMBERS PER CROP SECTOR

(a) Ornamentals

With approximately two thirds of the yearly number of applications, ornamentals represent by far the largest group of applications filed for Community plant variety rights. The number of applications in this sector has decreased in 2006 for the first time (184 fewer applications) after having constantly grown since the establishment of the Office. It is certainly too early to say whether this drop in application numbers is the beginning of a new trend.

The fact that ornamentals have the greatest share within the European plant variety protection system may be explained by the following:

- Ornamental varieties subject to applications for Community plant variety rights are almost exclusively vegetatively propagated. Their easy reproducibility triggers the demand for protection against unauthorised propagation.
- The breeding of vegetatively propagated varieties is less time consuming than the breeding of seed-propagated varieties whose characteristics need to be fixed through many propagating generations. This feature combined with a market depending on the quick evolution of tastes of consumers and cultivation techniques is certainly a major reason of the dynamic breeding activities.

Two species are clearly the subject of more extensive breeding than others: Roses and *Chrysanthemum* have always been dominating the sector in terms of number of applications.

The increase of the diversity of species subject to applications in the ornamental sector is noticeable: while roses and chrysanthemums represented nearly 30 % of the applications in the sector in 1996, their proportion in 2006 was around 23 %. Lily, *Gerbera*, *Pelargonium*, *Petunia* or *Impatiens* have always been important species in terms of numbers of applications, but the market is constantly looking for new products and clear trends could be observed in breeding activities at the level of species. The table below gives an overview of the number of applications for a few species since the establishment of the Community plant variety rights system 11 years ago. The number of applications for *Saintpaulia* and *Ficus benjamina* are

Gerbera

decreasing, whereas *Verbena*, *Calibrachoa*, *Nemesia* and *Zantedeschia* gained importance over the last years. For example, the breeding of *Zantedeschia* has led to many new colours and new use of the variety (cut flower and pot plant) for the European market and consequently the number of applications has increased importantly. Nevertheless, in 2006 a drastic decrease in application numbers could be observed for some of these species, counting for more than one fifth of the observed drop.

An increasing interest in the protection of different orchid species, woody ornamental shrubs and trees, perennials and a few applications for varieties of species for biomass production (*Salix*) was also recorded.

TABLE 1: NUMBER OF APPLICATIONS FOR CERTAIN SPECIES

Species	1996	1997	1998	1999	2000	2001	2002	2003	2004	2005	2006	Total
<i>Saintpaulia</i>	13	9	13	9	5	4	2	3	3	3	2	66
<i>F. benjamina</i>	17	9	6	1	2	5	2	5	2	0	1	50
<i>Verbena</i>	3	10	17	14	3	42	10	48	29	33	21	230
<i>Calibrachoa</i>	0	0	7	2	6	18	35	20	28	23	28	167
<i>Nemesia</i>	1	2	4	0	1	9	17	19	22	23	13	111
<i>Zantedeschia</i>	0	1	0	4	4	3	29	32	33	33	13	152

The decisive role the method of propagation plays in the need for an effective protection system becomes evident if one looks at the application numbers for varieties of species that are usually seed-propagated. *Viola*, *Cyclamen*, *Primula*, *Calceolaria* and *Bellis* are of paramount importance in the industry; however, there are no or hardly any varieties applied for Community plant breeders' rights. However, the cost-efficient development of vegetatively propagation methods, in particular *in vitro* techniques, might lead to an increase of their number of applications. In recent years, the Office received first applications for varieties of species that are usually seed propagated, but due to the development in tissue culture the Office received applications for vegetatively propagated *Primula* and *Cyclamen* varieties.

Finally, the rapid turnover of varieties in the ornamental sector is an additional reason for the high number of applications. After 11 years of existence of the Office, about 30 % of the ornamental varieties once granted Community plant variety rights are no longer active, a proportion higher than in the other sectors.

(b) Agricultural species

With 610 applications in the agricultural sector (22 % more compared to 2005), 2006 is the year with the highest number of applications during the last 10 years.

The top species in terms of number of applications is maize. The increase of applications in 2006 compared to previous years is remarkable for maize, potatoes, wheat and oilseed rape. Sunflower applications decreased slightly whereas the number of applications for ryegrass increased. The number of applications of the remaining agricultural species remains rather stable.

In species with hybrid varieties, such as maize and sunflower, the subject of applications are in most of the cases inbred lines. For sunflower lines, we can observe that new applications are earlier protected lines which have been converted to lines with certain disease resistances.

Although only single applications have been filed, it can be noted that breeding in species for biomass production such as *Rumex* or *Sida* is producing first varieties.

TABLE 2: NUMBER OF APPLICATIONS FOR CPVR RECEIVED FROM 1996 TO 2006 FOR THE 10 MOST IMPORTANT AGRICULTURAL SPECIES

Species name	1996	1997	1998	1999	2000	2001	2002	2003	2004	2005	2006	Grand Total
<i>Zea mays</i> L.	95	96	168	137	186	168	143	184	169	181	212	1 959
<i>Solanum tuberosum</i> L.	53	50	44	56	51	44	44	66	50	34	84	753
<i>Triticum aestivum</i> L. emend. Fiori et Paol.	65	36	38	34	45	31	61	42	75	54	76	666
<i>Hordeum vulgare</i> L. sensu lato	50	27	30	25	31	39	40	52	52	44	45	514
<i>Brassica napus</i> L. emend. Metzg.	24	33	17	27	16	36	29	40	41	29	44	407
<i>Helianthus annuus</i> L.	18	18	19	24	4	31	14	28	27	40	30	347
<i>Beta vulgaris</i> L. ssp. vulgaris var. <i>altissima</i> Döll	6	7	14	44	26	13	12	5	6	3	8	168
<i>Pisum sativum</i> L. sensu lato	8	18	13	10	6	13	12	9	11	21	11	165
<i>Triticum durum</i> Desf.	3	4	8	14	8	14	7	13	13	13	8	116
<i>Lolium perenne</i> L.	6	4	6	4	3	7	3	4	6	16	20	98

(c) Vegetable species

DUS testing tomato fruits

The year 2006 saw a 16 % increase in vegetable applications in comparison to the previous year (342 applications in 2006 compared to 296 in 2005), and represents a 174 % increase in applications for this sector compared to a decade earlier. This increase was mostly due to the huge augmentation of applications for tomato varieties, which more than doubled in number over the course of the previous 12 months (30 applications in 2005 compared to 68 in

2006), thus placing this species firmly in second place behind lettuce (93 applications) and a long way ahead of the jointly – third – placed French bean and pea, with 28 applications each. This surge in tomato, in particular for hybrid varieties, can probably be explained by the fact that seed companies see Community plant variety rights as an effective tool to combat the illegal propagation of their commercial varieties, where modern *in vitro* techniques are used to circumnavigate the biological protection hybrid varieties offer when the F2 generation produces segregated plants. Other increases in applications for greenhouse hybrid crops were also noted in 2006, whereas there continues to be a decrease in applications for *Brassica oleracea* crops.

(d) Fruit species

The year 2006 saw a 22 % increase in fruit applications in comparison to the previous year (168 applications in 2006 compared to 138 in 2005), and represents a 175 % increase in applications for this sector compared to a decade earlier. This increase was due to a steep rise in applications for peach/nectarine varieties (32 applications in 2005 compared to 53 in 2006), which firmly established it in first place for this sector after years in which this species

Strawberries

had vied for the top spot with apple and strawberry (by contrast, both of these species saw marked decreases last year: 30 applications in 2005 compared to 18 in 2006 for apple, and 21 applications in 2006 compared to 25 in 2005 for strawberry), as well as enormous increases in apricot applications, which more than trebled in number (8 applications in 2005 compared to 29 in 2006), thus outlining the healthy state of *Prunus* breeding at the moment. Another notable figure was that for the number of grants of Community plant variety rights awarded to fruit varieties last year, which increased 45 % from 84 titles in 2005 to 122 in titles in 2006.

(e) Origin of the applications

Since the foundation of the Community plant variety office applications were received from 50 countries. In all years, more than one third of all applications received originated from the Netherlands, underpinning the important role of that country. The Netherlands are followed, at quite some distance, by Germany, France and the United States of America. In 2006, Japan moved up to ninth position leaving Spain behind. As it can be seen from the chart below (Table 3), the 10 most important countries count in 2006 for 92.9 % of all applications filed at the CPVO. It can furthermore be seen from this table that there are only minor fluctuations in the origin of applications received.

TABLE 3: THE 10 MOST IMPORTANT COUNTRIES FROM WHERE CPVR APPLICATIONS WERE FILED (1996-2006)

Country of main applicant	Number of applications (absolute numbers; relative in parentheses)											
	1996	1997	1998	1999	2000	2001	2002	2003	2004	2005	2006	Total
Netherlands	478 (34.5)	578 (37.8)	664 (36.2)	716 (38.1)	805 (40.0)	784 (36.3)	810 (36.5)	871 (34.6)	957 (36.0)	1 056 (38.6)	1 048 (38.3)	8 767 (37.0)
Germany	223 (16.1)	241 (15.8)	299 (16.3)	311 (16.5)	289 (14.4)	311 (14.4)	385 (17.3)	320 (12.7)	381 (14.3)	411 (15.0)	401 (14.7)	3 572 (15.1)
France	162 (11.7)	210 (13.7)	260 (14.2)	303 (16.1)	242 (12.0)	332 (15.4)	239 (10.8)	302 (12.0)	337 (12.7)	313 (11.5)	332 (12.1)	3 032 (12.8)
USA	86 (6.2)	142 (9.3)	191 (10.4)	136 (7.2)	234 (11.6)	233 (10.8)	267 (12.0)	365 (14.5)	358 (13.5)	311 (11.4)	315 (11.5)	2 638 (11.1)
Denmark	87 (6.3)	83 (5.4)	79 (4.3)	107 (5.7)	108 (5.4)	71 (3.3)	97 (4.4)	167 (6.6)	145 (5.5)	105 (3.8)	114 (4.2)	1 163 (4.9)
UK	126 (9.1)	76 (5.0)	81 (4.4)	81 (4.3)	122 (6.1)	126 (5.8)	82 (3.7)	69 (2.7)	129 (4.9)	152 (5.6)	103 (3.8)	1 147 (4.8)
Italy	34 (2.5)	28 (1.8)	67 (3.7)	37 (2.0)	52 (2.6)	73 (3.4)	65 (2.9)	67 (2.7)	60 (2.3)	61 (2.2)	51 (1.9)	595 (2.5)
Belgium	61 (4.4)	20 (1.3)	43 (2.3)	36 (1.9)	41 (2.0)	46 (2.1)	46 (2.1)	63 (2.5)	56 (2.1)	44 (1.6)	77 (2.8)	533 (2.3)
Japan	9 (0.7)	35 (2.3)	22 (1.2)	16 (0.9)	13 (0.7)	31 (1.4)	28 (1.3)	51 (2.0)	27 (1.0)	55 (2.0)	58 (2.1)	345 (1.5)
Spain	13 (0.9)	18 (1.2)	31 (1.7)	22 (1.2)	24 (1.2)	31 (1.4)	45 (2.0)	46 (1.8)	29 (1.1)	29 (1.1)	43 (1.6)	331 (1.4)

8.2. Grants of protection

In 2006, the Office granted nearly 2 300 titles for Community protection. A detailed list of all protected varieties (status at 31/12/2006) is published in the separate annex to this annual report.

By the end of 2006, there were almost 13 000 Community plant variety rights in force. The table hereafter shows the number of titles granted for each year from 1996 to 2006 and it illustrates the continuous increase of varieties under protection within the Community system.

GRAPH 4: COMMUNITY PLANT VARIETY RIGHTS GRANTED AND RIGHTS IN FORCE (1996–2006)

The development in the number of Community plant variety rights in force must be seen in conjunction with the number of rights surrendered (Graph 5). The number of rights granted still greatly outweighs the number of surrenders. In 2006, a decrease in surrenders could be observed which is likely due to the reduction in annual fees from EUR 300 to EUR 200. It may also be assumed that the rights on some varieties are kept in force only to enjoy the protection extended to those varieties which are derived from them (the essentially derived varieties).

GRAPH 5: NUMBER OF SURRENDERS OF COMMUNITY PLANT VARIETY RIGHTS (1996–2006)

8.3. Technical examinations

In 2006, the CPVO initiated 1 898 technical examinations which were carried out by the different examination offices working on behalf of the Office. The chapter 'Examination offices' provides a detailed list of examination offices working on our behalf.

Relations with examination offices

(a) Tenth annual meeting with the examination offices

The 2006 meeting of the CPVO with its examination offices was attended by representatives of 23 EU Member States, Croatia, Romania, the European Commission, the UPOV office, as well as the breeders' organisations ESA and CIOPORA.

The main subjects of discussion were:

- the conduct of technical examinations at the breeder's premises in the ornamental sector;
- the exchange of plant material amongst examination offices;
- the reporting procedure where a takeover of existing technical reports is envisaged;
- the use of national guidelines for CPVO purposes;
- technical protocols for species without a CPVO, UPOV or national guideline for the technical examination;
- the procedures when deviating from or amending technical protocols;
- the procedure for the authorised taking of samples from the reference collection by breeder's representatives;
- the conflict of interest at examination offices;
- the payment of technical examinations of varieties classified as 'new species'.

The participants were furthermore informed on the state of affairs of the EU centralised database on variety denominations, the strategic discussion on the future DUS testing, the policy on research and development projects and the client extranet.

(b) Preparation of CPVO protocols

In 2006, experts from the Member States' examination offices were invited to participate in elaborating technical protocols for DUS testing which were subsequently approved by the Administrative Council (see Chapter 4). The following meetings were held:

- agricultural experts: draft protocol was discussed for hop;
- fruit experts: draft protocols were discussed for four species (apple, sweet cherry, sour cherry, and blackberry);
- ornamental experts: draft protocols were discussed for eight species (*Dendrobium*, *Alstroemeria*, *Chrysanthemum*, *Dahlia*, *Impatiens New Guinea*, *Rosa*, *Tulipa*, and *Salix*).

'Phalenopsis' orchid

Roses

(c) Further development of the centralised database for variety denominations

The Office released in July 2005 a website to test proposals for variety denominations for similarity. The database containing more than 400 000 denominations from national listing and plant variety rights registers of the EU and UPOV Member States. The database is accessible to national authorities of EU Member States, the European Commission and UPOV. In 2006, the Office focused its efforts on the improvement of the quality of data received, in cooperation with the contributors. A new version of the website was developed, planned to be available in the beginning of 2007. Applicants and procedural representatives of the Community plant variety right system but also applicants of national listing and national plant variety rights in the European Union will have access to this new website.

(d) Crop expert meetings

Three meetings and telephone conferences with agricultural experts were held throughout the year discussing trial design and uniformity standards in wheat, uniformity standards as actually applied in the CPVO technical protocol for *Triticale* and the preparation of a *Linum* technical protocol.

Two fruit expert meetings were held to discuss a revision of the CPVO technical protocol for apple varieties, the development of new test protocols on sweet cherry, sour cherry, blackberry, the clarification on the dates for the submission of interim reports, an agreement on submission of plant material issues (additional year of testing, harmonisation of plant material requirements and dates, feedback in case of problems, etc.) and to discuss how to address future proposals for R & D projects.

The ornamental experts held one meeting to discuss various technical issues of relevance for the sector and technical protocols for eight species.

(e) The multi-beneficiary programme of the European Commission on the preparation of Turkey and Croatia for the participation in the Community plant variety right system

The programme aims at informing competent bodies and stakeholders in the two countries on technical, administrative and procedural aspects of the Community PVR system thus preparing the relevant authorities on a possible future participation in the system. It started in October 2006 and will end in December 2007. A series of workshops and seminars with different topics and aiming at different groups of stakeholders will be organised in the two countries, crop experts will be trained at the CPVO examination offices. The programme was prepared and is managed by the CPVO whereas the European Commission provides the funding.

(f) Strategic discussion on the future DUS testing

The strategic discussion was launched in June 2005. A questionnaire was sent to the Administrative Council representatives of all the Member States requesting their viewpoints on how they perceived the future of DUS testing within the Community in the agricultural, vegetable, fruit and ornamental sectors; furthermore, querying whether there could also be a greater involvement of breeders in the technical examination of their varieties.

Responses were received from all the Member States by the beginning of 2006. Based upon this, the Office produced two sets of working documents and established three working groups to further discuss and analyse the subject matter of each of the questions. The three working groups, which were chaired by a member of the CPVO management, were:

Group A: Concentration of DUS testing in agricultural, vegetable and fruit sectors (Chair: Mr Theobald)

Group B: Reorganisation of DUS testing in the ornamental sector (Chair: Mr Elena)

Group C: Strengthening the role of breeders in DUS testing (Chair: Mr Kiewiet)

All three working groups met together for the first time in Angers on 23 May 2006 under the auspices of a general meeting as an introduction to the topic. At this general meeting it was decided to change the discussions on the fruit sector to Group B instead of Group A. Later on the same day, each working group convened to discuss their designated subject matter.

Following the initial findings of each working group, a second set of meetings was organised for each group in September/October 2006. During the course of the second set of meetings it became evident that the issue of 'quality' and the tools to designate examination offices attaining higher quality standards, were coming to the fore. Since each working group had exhausted its respective subject matter at the end of the second meetings, it was decided not to have any further meetings of each of the working groups, but to create instead subgroups on 'quality standards' and 'accreditation', which would be made up of interested parties from the previous three working groups.

The Office formulated working papers which were presented to the subgroups on 'quality standards' and 'accreditation' at their joint meeting on 8 November 2006. Based upon the initial findings at that meeting, revisions were made to both the working papers which were presented and discussed at a second meeting of the 'quality standards' and 'accreditation' subgroups on 11 December 2006. One of the recommendations emanating from this meeting was to change the terminology 'accreditation' into 'entrustment'.

The strategic discussion is not finalised yet but the main conclusion drawn by the CPVO at this stage is that meeting well defined quality requirements was considered by the participants to be the major regulating tool as regards examination offices involved in DUS testing in the European Community. This conclusion is based on the presupposition that the relevant authorities, national and community listing authorities as well as national and community PVR authorities, accept the 'one key, several doors principle'. This principle implies that a DUS test report produced by an examination office that meets, as far as the species in question is concerned, these quality requirements will be accepted by the competent authority for listing and PVR purposes.

(g) New species procedure

In the course of the year 2006, the CPVO received applications for varieties of 90 botanical taxa not being subject to Community plant variety rights applications before. Three inquiries, new species procedures, were launched by the CPVO in 2006. As a result of the inquiries, the following 51 new taxa could be attributed to examination offices by the Administrative Council:

Achillea ptarmica L.
Actaea racemosa L.
Agastache aurantiaca (A.Gray) Lint & Epling
Agastache Clayton ex Gronov.
Agave univitata Haw.
Alocasia x amazonica André
Alternanthera ficoidea (L.) R.Br. ex Roem. et Schult.
Anagallis monellii L.
Anemone L.
Asplenium ebenoides R. R. Scott
Asteriscus maritimus (L.) Less.
Boltonia asteroides var. *latisquama* (A.Gray) Cronquist
Brachypodium distachyon (L.) P. Beauv.
Bromus catharticus Vahl var. *catharticus*
Capsicum chinense Jacq.
Catalpa bungei C. A. Mey.
Centaurea montana L.
Cercis canadensis L.
Chamelaucium Desf.
Clethra alnifolia L..
Coreopsis L.
Cucumis africanus L. f.
Cucumis hirsutus Sond.
Dorotheanthus bellidiformis (Burm. f.) N. E. Br.
Draba aizoides L.
Epiphyllum anguligerum (Lem.) G.Don
Escallonia Mutis ex L. f.
Eupatorium L.
Festuca pratensis Huds.
Fragaria vesca L.
Heliconia psittacorum L. f.
Hesperozygis myrtoides (A. St.-Hil.) Epling
Jamesbrittenia O. Kuntze
Muehlenbeckia complexa (A. Cunn.) Meisn.
Muscari massayanum Grunert
Nandina domestica Thunb. Ex Murray
Oncidium Sw.
Ozothamnus diosmifolius (Vent.) DC.
Passiflora incarnata L.
Platycerium bifurcatum (Cav.) C. Chr.
Protea roupelliae Meisn.
Sanguisorba menziesii Rydb.
Scindapsus Schott
Scoparia dulcis L.
Sparrmannia africana L. f.
Sphyrospermum buxifolium Poepp. & Endl.
Tolmiea menziesii (Purch) Torr. et A. Gray
Vanda Jones ex R. Br.
Vitex agnus-castus L.
Wahlenbergia procumbens (Thunb.) A.DC.
Xanthocyparis nootkatensis (D.Don) Farjon & D.K. Harder

Graph 6 illustrates the evolution in the number of botanical taxa for which the CPVO received applications. At the end of 2006, applications for varieties belonging to 1 210 taxa were filed with the Office.

GRAPH 6: EVOLUTION OF THE NUMBER OF BOTANICAL TAXA FOR WHICH THE CPVO RECEIVED APPLICATIONS

9. IT DEVELOPMENTS

The CPVO conducted a survey on customer satisfaction in late 2004 (results presented in March 2005 in Rome) which demonstrated an overall good customer satisfaction with the existing website. Still it also showed that some online services could be introduced or improved to reach a better satisfaction level. In this respect, the Office proposed to develop an extranet dedicated to its clients. The aim of such an extranet website was to give the possibility to CPVO clients (representatives and applicants) to consult information about their files (status of applications, pending fees, debit and credit notes), retrieve documents (printouts of the Gazette, etc.).

The study began in the last quarter of 2005, and was followed by developments in 2006. The first tests with pilot clients were conducted in November and December 2006. The official release date is planned for the first quarter of 2007.

The client extranet is a web application, meaning it is accessible over the Internet using a simple browser. It is using data coming from a database which is a copy of the CPVO Plant Variety Rights database made every night.

It is split into two sections: a public access section and a restricted access section.

- **Public section:** search titles and applications, search publications, search appeals, print publications extracts, direct display of clients & representatives details, download Gazette issues (PDF).
- **Private section includes all features of the public section plus:** display detailed file information, status schema of application, technical examination basic information, financial information (invoices and foreseen fees), print copies of invoices, financial reminders, procedural representatives have direct access to all their files.

In parallel to the development of the extranet websites a database named ThirdParties has been created. This database contains all the companies, organisations and persons with which CPVO is in contact.

The identification and the access control of the web users is carried out with this database: Administrative Council website, client extranet (private section), Varietals Denominations centralised database, Technical liaison officers website.

In addition, the Third Parties database is daily used by all the CPVO staff members for the mails and e-mails.

10. CONTACTS WITH EXTERNAL ORGANISATIONS

10.1. Contacts with ESA & CIOPORA

(a) Pre-meetings

Breeders' representatives have an opportunity to comment on the various items included on the agendas of the Administrative Council in regular meetings with the Office. The Office subsequently keeps the Administrative Council informed about the content of these meetings.

(b) ESA Annual meeting

Representatives of the management of the Office attended the ESA General Assembly held in Brussels (16 and 17 October 2006) and several specialised section meetings.

(c) CIOPORA Annual meeting

The President of the Office attended the annual meeting of CIOPORA held on 12 April 2006 in Beijing, China.

10.2. Contacts with UPOV

The CPVO has participated in UPOV activities since 1996. In July 2005 the European Community has become a member of UPOV.

As members of the EC delegation, CPVO officials participate in the activities of UPOV and attend the meetings of the following bodies and committees of the international Union:

- UPOV Council,
- Legal and Administrative Committee,
- Technical Committee,
- Technical working parties (agricultural crops, vegetables, fruit crops, ornamental plants and forest trees),
- Working Group on Biochemical and Molecular Techniques (BMT) and its specialised subgroups,
- Enlarged Editorial Committee,
- Working groups on variety denominations and publication of variety descriptions.

The Vice Secretary-General of UPOV participates in most of the meetings of the CPVO Administrative Council. Senior officials of the UPOV office also regularly attend experts meetings or working groups organised by the CPVO dealing with technical and legal issues of common interest.

The CPVO signed a Memorandum of Understanding in October 2004 with UPOV for a programme of cooperation. In the framework of this cooperation the CPVO exchanged information with UPOV during the development of its centralised database on variety denominations in order to ensure compatibility with the existing UPOV plant variety database (UPOV-ROM). Both databases contain data on plant varieties for which protection has been granted, or which are the subject of an application for protection and also those which are included in national lists of varieties for marketing purposes.

The CPVO centralised database operates on the basis of a system of codes attributed to botanical names and developed by UPOV. Since its release in July 2005, the Office and UPOV started to exchange data extensively, UPOV collecting data from non-EU UPOV countries and the Office bringing together data from the EU. The CPVO assisted UPOV in the attribution of codes to the species name of varieties of the UPOV-ROM.

In several regions of the world where countries are members of UPOV, like Asia, Africa, Latin America and Caribbean, there is an emergent interest to know the details, cumulated experience and results relating to plant variety rights systems with a regional scope. The CPVO frequently provides speakers for seminars and technical workshops organised by UPOV.

10.3. Contacts with the African Intellectual Property Organisation (OAPI)

OAPI, an intergovernmental organisation based in Yaoundé (Cameroon), works on the implementation of the Bangui Agreement that has established a regional system of intellectual property rights of which plant breeders' right form a part. Consequently it is particularly interested in the experience gained by the CPVO running the Community system.

The President of the Office has signed, with the Director-General of OAPI, a Memorandum of Understanding setting up the framework for future cooperation. The decision of the Administrative Council of OAPI for the entry into force of the PBR system in 2006 and its implementation will provide multiple opportunities for cooperation in several fields of activity.

A regular exchange of publications is maintained.

10.4. Participation in international fairs

The CPVO considers its participation in international fairs as a useful tool in order to promote the Community system but also to have direct contacts with applicants. The 3 participations to such fairs have confirmed that expectation.

In early 2006 the CPVO attended IPM in Essen in a joint stand with Bundessortenamt, the German examination office, and the Salon du Végétal in Angers in a joint stand with GEVES, the French examination office.

Furthermore, in collaboration with the Dutch Raad voor Plantenrassen and NAKTUIN-BOUW, a joint stand of these three institutions was organised at the Hortifair in Amsterdam.

Standing breakfast at Hortifair, Amsterdam (NL)

10.5. Contacts with the OECD

The CPVO follows closely the activities of the OECD in the seed and variety sector. A representative of the CPVO attended the annual OECD meeting in Fortaleza, Brazil, in August 2006.

10.6. Other contacts

The CPVO maintains regular external contacts by participating in meetings organised by:

- the Secretariat-General of the European Commission: EU agencies coordination,
- the Personnel and Administration DG: Staff Regulations implementation matters,
- the Budget DG: Implementation of the new financial regulation and the internal audit function,
- Heads of the European seed certification agencies.

In addition, other fields of external activity can be mentioned, such as:

- The Translation Centre Administrative Council,
- The Steering Group of the SI2 Common Support Service,
- Coordination of the EU agencies at management level,
- Annual coordination meeting of the Publications Office with the EU agencies.

11. RELATIONSHIP WITH THE HEALTH AND CONSUMER PROTECTION DG

11.1. Standing Committee on Seeds and Propagating Material for Agriculture, Horticulture and Forestry

The above mentioned Standing Committee meets regularly in Brussels and staff members of the CPVO attended these meetings when the subject was of relevance for the Community plant variety rights system.

Of particular interest for the CPVO throughout the year 2006 were the following items:

- Commission activities as regards the cross-references to the CPVO, technical protocols for DUS testing;
- Commission regulation on implementing rules for the suitability of variety denominations;
- Commission activities in respect of the common catalogues for agricultural and vegetable species and in particular the integration of the catalogues from the new Member States;
- programme and technical protocols for the Community comparative trials;
- implementing measures in respect of conservation varieties and plant genetic resources;
- the revision of scientific plant names;
- reflections of the Commission as regards a possible transfer of tasks to the CPVO.

11.2. Enlargement

The Office kept contact with the relevant services within the Health and Consumer Protection DG Sanco in order to prepare the accession of Bulgaria and Romania to the EU.

The intention of the Office was to continue to collect information and to evaluate the national DUS testing systems in order to consider a possible future cooperation of the national organisations of the candidate countries in the Community DUS network as CPVO examination offices.

In addition, technical experts from Croatia, Romania and Turkey attended the 2006 annual meeting with the examination offices organised by the CPVO in Angers.

The CPVO furthermore prepared an EU Commission-financed programme in order to involve Turkey and Croatia in the work of Community agencies. The first preparatory activities were undertaken by the end of 2006. A project manager has been recruited in order to carry out the programme throughout 2007.

12. PUBLIC ACCESS TO DOCUMENTS HELD BY THE CPVO

In 2001 specific rules on public access to documents held by the European Parliament, the Council and the Commission were introduced by the adoption of Regulation (EC) No 1049/2001 ⁽¹⁾. In order for these rules to apply also to documents held by the Office, a new article, Article 33(a), was introduced to the basic regulation in 2003 by the adoption of Council Regulation (EC) No 1650/2003 ⁽²⁾.

Article 33(a) contains the following elements.

- Regulation 1049/2001 regarding public access to European Parliament, Council and Commission documents shall also apply to documents held by the Office. This provision entered into force on 1 October 2003.
- The Administrative Council shall adopt practical arrangements for implementing Regulation 1049/2001. The Administrative Council adopted such practical arrangements on 25 March 2004. Those rules entered into force on 1 April 2004.
- Decisions taken by the Office on public access to documents may form the subject of a complaint to the Ombudsman or of an action before the Court of Justice.

Regulation 1049/2001 as well as the rules to be adopted by the Administrative Council are available on the website of the Office. Information on these rules and forms to use when requesting access to a document has also been published on the website of the Office.

The Office follows up the implementation and application of the rules on public access to documents by reporting annually on information such as the number of cases in which the Office refused to grant access to documents and the reasons for such refusals.

Year of receipt	Number of requests for access received	Number of refusals	Reasons for such refusals
2004	30	6 (partial)	Confidential technical questionnaire not sent
2005	55	2 (partial)	Confidential technical questionnaire not sent
2006	58	6 (partial)	Confidential technical questionnaire not sent

⁽¹⁾ Regulation (EC) No 1049/2001 of the European Parliament and of the Council of 30 May 2001 regarding public access to European Parliament, Council and Commission documents, OJ L 145, 31.5.2001, p. 43.

⁽²⁾ Council Regulation (EC) No 1650/2003 of 18 June 2003, amending Regulation (EC) No 2100/94 on Community plant variety rights, OJ L 245, 29.9.2003, p. 28.

13. REPORT OF THE CPVO DATA PROTECTION OFFICER ('DPO')

13.1. Legal background

Regulation (EC) No 45/2001 of the European Parliament and of the Council of 18 December 2000 on the protection of individual rights with regard to the processing of personal data by the Community institutions and bodies and on the free movement of such data, was adopted for the purpose of complying with Article 286 of the Treaty. Article 286 requires the application to the Community institutions and bodies of the Community acts on the protection of individuals with regard to the processing of personal data and the free movement of such data.

Processing of data has a quite broad meaning and does not only mean transferring data to third parties, but also collecting, recording, storing data, whether or not by electronic means.

13.2. Role and tasks of the Data Protection Officer

Regulation (EC) No 45/2001 requires the nomination of at least one Data Protection Officer in the institutions and bodies who should ensure in an independent manner the internal application of the provisions in the regulation.

The DPO keeps a register of all personal data processing operations in the institution/body and informs on rights and obligations, provides services and makes recommendations. The DPO notifies risky processing of personal data to the European Data Protection Supervisor (EDPS) and responds to requests from the EDPS.

By decision of the President, a DPO was appointed at the CPVO for a term of two years. He shall be eligible for reappointment up to a maximum of 10 years.

13.3. Report of the CPVO Data Protection Officer for 2006

In 2006, the DPO of the Community Plant Variety Office undertook the following actions:

- filed notifications to the EDPS concerning processing operations likely to present specific risks;
- prepared a policy for the use and monitoring of electronic tools;
- participated in meetings held by the EDPS and the DPOs from the other EU institutions and agencies.

15. DECISIONS OF THE BOARD OF APPEAL IN 2006

In 2006, the Board of Appeal of the CPVO met during three sessions in May, July and October in Angers and reached the following decisions.

15.1. Case A 003/2004 – Sumcol 01

By Decision R446 of 19 April 2004, the Office rejected an application for a variety of the species *Plectranthus ornatus* Codd. with the denomination 'Sumcol 01' on the basis that it was not distinct from a reference variety. The reference variety had been sent by a person working for a Botanical Garden Kirstenbosh in South Africa to the examination office (Bundessortenamt). The appellant claimed, in essence, that the reference variety was not of common knowledge since it came from a private garden, and not the botanical garden in which the person who had sent the material worked. According to the appellant, the material was, in fact, cuttings from the variety 'Sumcol 01' itself. On 2 May 2006 the Board rejected the appeal. Indeed, the Board considered that the variety used for comparison was the reference variety and not Sumcol 01, and that the reference variety was of common knowledge on the date of application. The decision of the Board has been appealed to the Court of First Instance of the European Communities on 18 July 2006 (Case No T-187/06). The case is still pending.

15.2. Case A 007/2005 – Thunderbolt

By Decision R574 of 14 November 2005, the CPVO rejected the application for a CPVR for a variety of the species *Hosta Sieboldiana* (Hook) Engl and with the denomination 'Thunderbolt'. In a decision of the same date, the CPVO upheld an objection lodged against the application. The objector had provided the examination office with a reference variety which proved not to be distinct from Thunderbolt. The objector showed orders from customers having bought this variety. The decision to refuse the application was based on lack of distinctness.

The appellant argued that the variety ordered by the objector's clients was the genuine 'Great Expectations' variety and not the 'reference variety', the confusion coming from the fact that both varieties had been marketed under the same denomination during a certain period of time.

The Board of Appeal stated that it could not be proven that the 'reference variety' was a matter of common knowledge on the date of application. Orders provided by the objector did not prove that his customers requested the 'reference variety'. Based on the evidence provided, it could have been another variety. The Board of Appeal established that since the 'reference variety' was not of common knowledge at the date of the application its non-distinctness with the 'Thunderbolt' variety was not relevant. The Board of Appeal annulled the decision to refuse the application and the decision of the Office to uphold the objection.

15.3. Appeal Case 004/2005 – Moreya

An application for a Community Plant Variety Right (CPVR) was filed on 28 October 2003 for the Moreya variety of the *Gypsophila* L. species. An objection was filed against the grant of a CPVR to the Moreya variety, based on the lack of distinctness. The appellant stated that the variety had been marketed in a mixture of varieties under the name Morstars from April 1999 outside the European Union (EU) and from October 1999 within the EU.

The Office found the variety distinct and did not find the evidence on non-novelty sufficient and took a negative decision on the objection and granted a CPVR to the Moreya variety.

The objector lodged an appeal against these decisions arguing that court proceedings in Israel proved that the Moreya variety had been marketed in a mixture named Morstars as early as April 1999 and therefore was not novel. He also argued that Moreya was not distinct from the Dangypmini variety.

The Board of Appeal found that the Morstars mixture did indeed contain the Moreya variety amongst two others and that it indeed had been marketed outside the EU more than four years before the application date and within the EU, more than one year before the application date. Therefore, the Board considered the Moreya variety as not novel according to Article 10(1)(a) and (b) of Regulation (EC) No 2100/94. The Board consequently cancelled the decision on the objection and the decision granting a CPVR to the Moreya variety.

16. ANNEX (BOARD OF APPEAL)

APPEALS RECEIVED BY THE CPVO AND DECISIONS TAKEN BY THE BOARD OF APPEAL
SINCE THE BEGINNING

Number of appeals received by the CPVO	Reasons for the appeal received	Number of decisions taken by the Board of Appeal	Number of the decision and date	Date of publication in the Official Gazette of the CPVO
